STAT  
Comment on proposed

1. This Office does not concur in the proposed regulation. It is lacking in clarity (e.g., paragraph 2, especially the use of the word "veterinary"). It is in apparent conflict with existing regulations.

STAT  
2. The comments made in the opinion of this Office of 4 May 1955, re proposed  are germane here insofar as they pertain to conflict with the 60-series of regulations. It seems to us most difficult for the user of the regulations to determine, without page by page scrutiny of all existing regulatory issuances, where to turn for assistance on particular types of liaison. (By the definitions expressed in the 60-series, "liaison" can be had only with Government agencies. Relations with non-government agencies are characterized as "contacts".)

STAT  
3. The functions of the Medical Staff are set forth in  under paragraph 19. Subparagraphs a(4), f and i appear to accomplish the purposes to which this regulation is directed.

STAT  
4. If experience has demonstrated that the present statement of functions is inadequate to ensure proper coordination, it is recommended that, rather than promulgating the proposed regulation,  paragraph 19(1) be amended to read as follows:

"Conduct all medically-related liaison and contact activity necessary to meet Agency requirements, with the exception of foreign intelligence information collection in the medical field."
